1. Introduction

1.1 What is the application?

This application is a health meal recommendation web application designed to help users create personalised weekly meal plans. It generates meal recommendations based on personal information such as age, weight, and gender to better meet users' nutritional requirements for the week.

The application also provides personalised filtering functions. For example, users can select specific allergens, and the system will carefully filter meals to help them avoid foods that may cause allergic reactions.

In addition, the application supports different weight management goals and exercise training of varying intensities. Before generating a diet plan, users can choose from three dietary goals: weight loss, weight gain, or a normal healthy diet. Users can also freely select their desired exercise intensity to generate a diet plan that better matches their pace. This allows the system to provide more suitable recommendations based on the user's needs.

Finally, the web application includes a community platform where users can share experiences, post suggestions, upvote content, and follow other users. The application also includes a user profile dashboard that allows users to view their personal information, track health metrics, and monitor their progress in a clear and intuitive interface.

1.2 Why use this application?

1. Many users face the heavy pressure of work, which makes it difficult for them to plan healthy meals on their own. This application helps save time by automatically generating a weekly meal plan.

2. Some users also find it difficult to decide what to eat every day. By immediately providing a healthy plan, the application reduces this difficulty and makes meal planning more convenient. In addition, the system can provide more personalised recommendations based on the user's preferences and dietary needs, helping users enjoy each meal more easily.

3. The application also supports different health goals by offering meal plans for weight loss, weight gain, and normal healthy eating. This makes it suitable for users with different dietary needs and body management goals.

4. Moreover, following a healthy diet can sometimes feel lonely. The community function allows users to communicate with others, share ideas, and receive support and encouragement.

1.3 Key benefits

- Personalised weekly meal plans
- Support for different diet goals
- Allergen-based meal filtering
- A simple and user-friendly recommendation process
- Community interaction and experience sharing
- Improved awareness of healthy eating habits

1.4 Purpose of the manual and intended users

This manual is designed to help users understand the main functions of the web application and use them effectively. It provides guidance on basic operations, explains how different types of users can use the system, and offers support for common

questions and issues.

This manual is mainly intended for three types of users.

- The **first** group is general users who want to receive nutritious and personalised meal plans.
- The **second** group is community users, who want to communicate with others, share experiences, and gain support while following healthy eating plans.
- The **third** group is administrators, who are responsible for managing the platform and handling issues.

1.5 System requirements

To access and use the web application, users need:

- a stable internet connection
- a modern web browser, such as Google Chrome, Edge, or Safari
- a registered user account to access personalised functions

2. Landing Page

2.1 Introduction

Our project, **MyDiet**, is a web-based application that helps users develop healthier eating habits. The landing page is the first page users see, and it introduces the main idea and functions of the system.

When users open the page, they see the main headline, “Track Your Meals, Transform Your Health,” which shows the purpose of the application. There is also a short description explaining that users can track their meals and get nutritional information more easily. A “Start Free Today” button is provided so users can begin using the system.

At the top of the page, there is a navigation bar with sections such as *Features*, *How It Works*, and *Testimonials*. When users click these items, the page scrolls down to the corresponding section instead of opening a new page.

2.1.1 Features

In the **Features** section, the system introduces its main functions. These include personalized nutrition plans, photo-based food tracking, and a community feature. The

meal plans are generated using algorithms based on user information such as age, weight, and goals. The food tracking function uses AI to analyze meals from photos and estimate calories and nutrients. The community function mainly allows users to share their recipes and supports tracking other users, similar to following their favorite bloggers.

2.1.2 How It Works

The **How It Works** section explains the process in three steps. First, users enter their personal information. Then, the system generates meal plans based on this data. Finally, users can track their progress and adjust their habits over time.

2.1.3 Testimonials

The **Testimonials** section shows feedback from users, including their experiences with weight management and diet improvement. This gives an idea of how the system can be used in practice.

2.2 Registration

The registration page allows new users to create an account before using the system. The layout is simple, with a short introduction on the left and the sign-up form on the right.

The screenshot shows the MyDiet registration interface. On the left, a motivational message 'Start Your Health Journey' is accompanied by three key benefits: quick setup, data privacy, and no credit card requirement. On the right, a structured 'Create Account' form guides the user through entering personal details (name, email, password) and agreeing to terms. The form includes a confirmation field for the password and a clear 'Create Account' button. Alternative sign-up options for Google and Apple are provided below the main form, along with a 'Sign In' link for existing users. A 'Back to Landing Page' link is located in the top right corner.

Users are required to enter basic information, including first name, last name, email, and password. There is also a confirmation field for the password to reduce input errors. Before creating an account, users need to agree to the terms of service and privacy policy.

A “Create Account” button is provided to submit the form. In addition to the standard registration process, users can also sign up using third-party options such as Google or Apple, which makes the process faster.

On the top right corner, there is a “Back to Landing Page” option, allowing users to return to the main page. At the bottom of the form, there is also a link for users who already have an account to go to the login page.

2.3 Login

The login page is designed for existing users to access their accounts. The structure is similar to the registration page, which keeps the experience consistent.

Users need to enter their email and password to sign in. There is also a “Remember me” option that allows users to stay logged in on the same device. If users forget their password, they can click the “Forgot password?” link for recovery.

A “Sign In” button is used to submit the login information. Similar to the registration page, users can also log in using Google or Apple accounts.

There is also a link for users who do not have an account yet, which directs them to the registration page. In addition, users can return to the landing page through the navigation option at the top.

3. Basic Workflow: Integrated User Journeys

This section provides a detailed, step-by-step guide on how each specific user type can navigate MyDiet to fulfill their health and social objectives.

3.1 The Personalized Nutrition Workflow (For Health Users)

Primary Goal: To establish a data-driven nutritional baseline and maintain a healthy diet through automated planning and AI logging.

Step 1: Establishing Your Nutritional Profile

- **Access the Module:** Click the Plan tab on the navigation bar.
- **Physical Data Entry:** Input your Age, Height (cm), and Weight (kg) .
- **Activity & Gender Selection:** Select your gender and current activity level (ranging from Sedentary to Very Active).
- **Constraint Definition:** Enter any Allergies.
 - *Note:* Multiple items must be separated by commas (e.g., *Peanuts, Milk*) for the system to filter the 165,000+ recipe database accurately.
- **Execution:** Click Generate My Plan.

The screenshot shows the 'Personalize Your Plan' interface of the MyDiet app. The navigation bar at the top includes 'MyDiet', 'Homepage', 'Plan' (highlighted), 'Identifier', and 'Community'. The main heading is 'Personalize Your Plan' with a subtext 'Tell us about yourself so we can create the perfect meal plan.' The form contains several input fields and buttons:

- YOUR GOAL:** Three buttons: 'Fat Loss' (selected), 'Gain Weight', and 'Maintain'.
- TARGET WEIGHT (KG):** A text input field with a placeholder 'e.g. 65'.
- AGE:** A text input field with a placeholder 'e.g. 25'.
- HEIGHT (CM):** A text input field with a placeholder 'e.g. 175'.
- WEIGHT (KG):** A text input field with a placeholder 'e.g. 70'.
- GENDER:** A dropdown menu with 'Male' selected.
- ACTIVITY LEVEL:** A dropdown menu with 'Sedentary' selected.
- ALLERGIES (COMMA SEPARATED):** A text input field with a placeholder 'e.g. Peanuts, Shellfish'.
- Generate My Plan:** A large blue button at the bottom.

Step 2: Managing the Weekly Plan

- **Review Daily Macros:** Click on any specific day (e.g., Monday) to view the calculated Calories, Protein, Carbs, and Fats for each meal.

- **Recipe Instructions:** Click Recipe Details on any meal card to view the ingredients and step-by-step cooking instructions.

- **Customization:**
 - **Swap:** Click the Swap button to automatically replace a meal with the next highest-scoring recipe that fits your macros.
 - **Alternatives:** Click the Alternatives dropdown to manually choose from the top 3 backup recipes.

Step 3: Real-Time AI Food Logging

- **Access Identifier:** Navigate to the Identifier tab.
- **Image Upload:** Drag-and-drop or click to upload a photo of your meal.

- **Verification:** Review the AI-detected food items, confidence levels, and estimated calories.
- **Logging:** Click Confirm & Log Today to save the intake data to your history.

Step 4: Monitor Your Daily Progress

After logging your meals, navigate to the Homepage, which serves as your central dashboard for tracking daily nutritional intake and progress.

From this page, users can:

- View their daily calorie and macronutrient progress
- Check off completed meals
- Monitor their daily streak and history

For detailed functionality, refer to [Section 5: Homepage & Profile.](#)

3.2 The Social Interaction Workflow (For Community Users)

Primary Goal: To gain social support, share dietary experiences, and stay motivated through interaction.

Step 1: Content Discovery

- **Browsing:** Navigate to the Community tab to view Recommended or Trending posts.
- **Targeted Search:** Use the Search Bar or Tags (e.g., #StayHealthy) to find specific recipes or health tips.

Step 2: Community Engagement

- **Post Details:** Click any post to view full content, high-quality images, and other users' feedback.
- **Interactive Support:** Support your peers by clicking Like, or using the Comment/Reply features to share encouragements.

Step 3: Creating and Sharing Posts

- **Initiation:** Click the green "+" button at the bottom right.
- **Content Creation:** Input your post title and content, upload photos of your

progress, and add comma-separated tags.

- **Publication:** Click Post to share your journey with the community.

3.3 The Platform Management Workflow (For Administrators)

Primary Goal: To ensure platform stability, moderate community interactions, and resolve technical issues.

Step 1: Operational Monitoring

- **System Stability:** Administrators ensure the platform remains accessible via modern browsers and maintains a stable connection for all active users.

Step 2: Content Moderation

- **Guideline Enforcement:** Admins review community interactions to ensure users respect community guidelines, removing any inappropriate or offensive content.

Step 3: Support and Troubleshooting

- **Issue Resolution:** Administrators handle account-related issues, such as user authentication failures or troubleshooting form validation errors.

4. Managing Meal Plans

Purpose

This section explains how to use the MyDiet recommendation engine to generate, customize, and manage your weekly nutritional meal plans. The system uses strict

nutritional science algorithms (e.g. the Mifflin-St Jeor formula) to calculate your precise Basal Metabolic Rate (BMR) and match you with the best recipes from a database of over 165,000 options.

4.1 Accessing the Meal Planner

Assuming you are already logged in to your account, click the **Plan** tab on the top navigation bar from your Dashboard to access the meal planning module.

4.2 Personalizing and Generating Your Plan

To ensure the algorithm calculates your target calories and macronutrients accurately, you must provide precise physical data.

The screenshot shows a web form titled "Personalize Your Plan" with the subtitle "Tell us about yourself so we can create the perfect meal plan." The form is set against a dark purple background. It contains several input fields and buttons:

- YOUR GOAL:** Three buttons labeled "Fat Loss", "Gain Weight", and "Maintain". The "Maintain" button is highlighted in a lighter green.
- AGE:** A text input field containing the number "18".
- HEIGHT (CM):** A text input field containing the number "175".
- WEIGHT (KG):** A text input field containing the number "70".
- GENDER:** A dropdown menu showing "Male" with a downward arrow.
- ACTIVITY LEVEL:** A dropdown menu showing "Moderate" with a downward arrow.
- ALLERGIES (COMMA SEPARATED):** A text input field containing the word "Peanuts".
- Generate My Plan:** A large, bright green button at the bottom of the form.

Steps:

1. **Select your Goal:** Choose between **Fat Loss**, **Gain Weight**, or **Maintain**.
2. **Enter your physical stats:**
 - Enter your Age.
 - Enter your Height in **CM**.
 - Enter your Weight in **KG**.
3. **Select your Gender and Activity Level:** Choose your activity frequency (from Sedentary to Very Active) from the dropdown menus.
4. **Enter Allergies:** Type any ingredients you must avoid.

- *Important:* You must use commas to separate multiple allergies (e.g., *Peanuts, Shellfish*) to ensure the system filters them correctly.

5. Click the **Generate My Plan** button.

4.3 Navigating the Weekly Overview & Sidebar Controls

Once generated, you will see the **Weekly Meal Plan** view, displaying your meals from Monday to Sunday. To ensure variety, the algorithm automatically excludes any recipes you have already been assigned within the 7-day period.

4.3.1 Making Quick Updates

If your stats or goals change mid-week, use the left sidebar:

- Click **Update** next to *My Stats*, *Current Goal*, or *Allergies*.
- Enter your new data and click **Save**.

The sidebar contains four sections:

- My Stats**: Includes fields for Height (175 cm), Weight (70 kg), and BMI (22.9). An **Update** button is in the top right.
- Current Goal**: Shows a **Maintain** goal with an **Update** button.
- Allergies**: Shows **Peanuts** with an **Update** button.
- Activity Level**: A progress bar with five segments. The first three are green, and the last two are grey. The label **Moderate** is centered below the bar. An **Update** button is in the top right.

The bottom sidebar contains two buttons:

- Regenerate Plan**: A green button with a circular arrow icon.
- Edit Settings & Regenerate**: An orange button with a circular arrow icon.

4.3.2 Regenerating Options

- **Regenerate Plan:** Click this to keep your current stats but trigger the algorithm to search the database and score a completely new set of meals for the week.

- **Edit Settings & Regenerate:** Click this to return to the initial setup form for a complete profile overhaul.

4.4 Viewing Daily Details and Recipe Instructions

Steps:

1. Click on a specific day (e.g., **Monday**) in the Weekly view.

2. Review the precise macro breakdown (**Calories**, **Protein**, **Carbs**, **Fats**) for Breakfast, Lunch, and Dinner.

3. Click the **Recipe Details** button on any meal card.

4. A popup window will display:

Avocado Serrano Ham White Cheddar Cheese Breakfast Sandwich

🕒 Breakfast ⌚ 20m

< 30 Mins Easy

793
kcal
Calories

26
g
Protein

102
g
Carbs

33

Fats

Ingredients

INGREDIENT	QTY
Hellmann's mayonnaise	1/2
parsley	3
thyme	1
marjoram	1
garlic powder	1
fine sea salt	1/4
white pepper	1/4
red-leaf lettuce	8
serrano ham	8
unsalted butter	4

- A detailed **Ingredients** list with required quantities.

Instructions

- 1 In a bowl whisk mayonnaise, fresh herbs, garlic powder, salt and white pepper.
- 2 Toast bread, spread herbal mayonnaise, add lettuce, cheese, Maui onion and ham.
- 3 In a bowl whisk 1-egg, season with salt and white pepper. In a non-stick skillet melt 1-teaspoon unsalted butter fry eggs one at a time.
- 4 Place fried egg on sandwich, sliced tomato, avocado, lettuce and cover sandwich. Slice sandwich in half and place on a serving plate.
- 5 Garnish plates with fresh fruit.

- Step-by-step cooking **Instructions**.

4.5 Customizing Individual Meals (Swap & Alternatives)

If you dislike a specific meal, you can replace it without disrupting the rest of your week.

- **auto-replace a meal (Swap):**

Click the **Swap** button. The system will trigger the pickMealSlot function, automatically replacing the meal with the next highest-scoring recipe that perfectly matches your daily macro targets.

- **To manually choose a backup (Alternatives):**

1. Click the **Alternatives** dropdown on the meal card. The system displays the top 3 alternative recipes that scored closest to your macro targets.

2. Click the **(i)** icon next to an alternative to view its ingredients and cooking steps before deciding.
3. Click **Select** on your preferred alternative. The system will instantly update your daily plan.

💡 System Note on Recipe Matching:

During generation or swapping, recipes are filtered to fall within $\pm 15\%$ of your calorie target (expanding to $\pm 25\%$ if necessary). The system then uses a *Least-Squares scoring method* to find meals that perfectly balance your required protein, carbs, and fats.

5. Homepage & Profile

5.1 Overview

You can enter this page by clicking "Homepage" on the navigation bar. The primary function of the Homepage is to display today's recipes and meals logged and confirmed via the "Identifier," allowing users to understand their intake status for the day. This page includes sections for Check-in, Date Bar, Status Bar, "Today's Meals," and "Extra Meals".

5.2 Daily Tracking and Progress

5.2.1 Check-in

Clicking the fire icon in the top right corner increases the check-in streak by one day.

5.2.2 Calendar

This section displays the dates; users can click "view full calendar" to see the complete calendar.

Clicking on past or future dates allows users to view the meals for those specific days, but they cannot be modified. The system will prompt: *"Viewing data for [Date] — meal check-in is only available today"*.

5.2.3 Status Bar

This area displays the total calories, Protein, Carbs, and Fats consumed today. As shown in the image, each metric has a designated upper limit.

5.3 Today's Meals

This section displays the recommended meals for the day. Clicking the checkmark button (✓) will correspondingly increase the values in the status bar and is accompanied by a confetti effect for celebration, providing emotional value to the user.

5.4 Extra Meals

Food items added using the Identifier will be reflected here.

Clicking the "x" icon allows you to delete the corresponding food entry.

Clicking "delete all" will clear all extra meal records.

5.5 Other Components

Clicking the camera button will jump directly to the Identifier interface. Clicking the search button will jump directly to the Community interface.

5.6 Profile

5.6.1 Overview

Click the circular avatar on the rightmost of the navigation bar to enter this page. This page serves as a summary of the other four interfaces, containing the Personal

Profile, Change Account & Sign out, Health Metrics, Body Composition History, Preferences & Restrictions, Social Summary, Privacy & Settings, Following, and My published Posts.

5.6.2 Personal Profile

Includes basic information such as Name, UID, Gender, Age, and Height.

5.6.3 Change Account & Sign out

Provides buttons to **Change Account** or **Sign out** of the current session securely.

5.6.4 Health Metrics

Includes your **Current Weight**, **Target Weight**, **Days remaining**, and **BMI**.

A toggle is provided to switch between **kg/cm** and **lb/ft** units.

5.6.5 Body Composition History

Displays a visual chart of weight and body fat changes over time. Hover the cursor over any data point on the chart to view specific details for that date

5.6.6 preferences & restrictions

Displays the **Allergens** and **Restrictions** you have saved in your profile.

5.6.7 Social Summary

Shows a summary of your community activity, including the number of **Posts**, **Total Likes**, **Saved**, **Followers**, and **Following**.

5.6.8 Privacy & Settings

Allows users to toggle the visibility of their **health goals** and **shared recipes** within the community.

5.6.9 Following List

Displays a list of all users you are currently following.

5.6.10 My Posts

A gallery showcasing all the posts you have published to the community.

6. AI Food Identification Feature

6.1 Overview

The AI Food Identification feature allows users to upload a photo of their meal and automatically detect the food items along with estimated nutritional information. This function helps users quickly log their daily food intake without manual searching.

6.2 How to use the Food Identifier

6.2.1 Access the feature

1. Log in to your account
2. Click on the “**Identifier**” tab in the navigation bar

6.2.2 Upload a food image

Users can upload an image in two ways:

- Drag and drop the image into the upload box
- Click the upload area to select a file from the device

Users can also click **“Try with sample image”** to test the feature.

6.2.3 View recognition results

After uploading, the system will process the image and display:

- A preview of the uploaded image
- A list of detected food items
- Estimated portion size
- Confidence level
- Estimated calories

6.2.4 Edit or confirm results

Users can:

- Edit detected items
- Remove incorrect items
- Review the total calorie count

6.2.5 Log the meal

Click “**Confirm & Log Today**” to save the meal.

Click “**Cancel**” to discard.

6.3 Key features

- Automatic food recognition from images
- Calorie estimation
- Editable results
- Quick logging

6.4 Notes and limitations

- Accuracy depends on image quality
- Complex dishes may not be fully identified
- Users should review results before confirming

7. Community Feature

7.1 Overview

The Community feature allows users to interact with others, share experiences, and gain support during their health journey.

7.2 Accessing the Community

1. Log in
2. Click the “**Community**” tab

7.3 Browsing posts

Users can:

- View **Recommended** posts
- View **Trending** posts
- Use the search bar
- Explore tags

7.4 Viewing post details

Click a post to open full view:

- Full content
- Image
- Comments
- Likes

7.5 Interacting with posts

Users can:

- Like posts
- Comment
- Reply

7.6 Creating a post

1. Click the “+” button
2. Add content and images
3. Add tags
4. Submit

7.7 Tags and contributors

- Tags help categorize content
- Top contributors show active users

7.8 Benefits of the community

- Share experiences
- Gain motivation
- Learn from others
- Build healthy habits

7.9 Notes

- Follow community guidelines
- Avoid inappropriate content
- Respect others

8. Glossary

AI-based Food Recognition

A feature that uses artificial intelligence to identify food items from uploaded photos and estimate their nutritional content, such as calories and macronutrients.

Algorithm-based Personalization

A method that generates personalized meal plans based on user data such as age, weight, goals, and activity level, using predefined rules or algorithms.

User Authentication

The process of verifying a user's identity through login credentials (such as email and password) before allowing access to the system.

Form Validation

A mechanism that checks whether user input meets required conditions (for example, correct email format or matching passwords) before the form is submitted.

Dashboard

A central page where users can view key information, such as daily calorie intake, nutrition progress, and meal tracking.

Drag-and-Drop Upload

A feature that allows users to upload files by dragging them into a designated area instead of selecting them manually.

Community Interaction

A feature that allows users to share posts, view content from others, and participate in discussions within the platform.

BMI (Body Mass Index)

A value calculated from a person's height and weight, used to estimate whether their body weight is within a healthy range.
